

RESULTS

A Comparative Study of Cloud, Edge, and Hybrid IoT Architectures for Smart City Applications

HYBRID BASED

Bins	Exec Time	Cloud Energy	Network
20	586	1.36E7	0
50	2004	1.52E7	1,018,658
100	2748	1.52E7	1,018,658
150	2685	1.52E7	1,018,658
200	3104	1.52E7	1,018,658

CLOUD BASED

Bins	Exec Time	Cloud Energy	Network
20	782	1.41E7	7,992
50	2120	1.52E7	19,978
100	2436	1.52E7	19,978
150	2751	1.52E7	19,978
200	3244	1.52E7	19,978

EDGE BASED

Bins	Exec Time	Energy	Network
20	639	1.33E7	0
28	1185	1.33E7	0

The maximum edge could compute is till 28 bins as the network latency increases and there is no interference of it causing communication breakage.
